Contents

Preface 1

1 Introduction 3

1.1 Analog and Digital Workflows 4
Analog Workflow for Negative Film 4
Analog Workflow for Slide Film 5
Hybrid Workflow: Shooting Analog, Scanning, Digital Processing 6
Digital Workflow: Shooting and Editing 8

1.2 Alternatives to the Film Scanner 10
Megapixel in Comparison: DSLR, Film Scanner, 35 mm Film 10
Digital Single Lens Reflex Cameras 12
Flatbed Scanners with Transparency Adapter 13
Scanning Prints 17
Shooting a Projected Slide with a Digital Camera 18
Duplicating Slides with DSLR and Slide Copy Attachment 18
Film Processing with Photo CDs 18
Kodak Picture CDs 18
Fujicolor CD 19
Comparison: Photo CDs vs. Manual Scans 19
Professional Scanning Services 22

2 Performance Characteristics of Film Scanners 23

2.1 Key Specifications of a Film Scanner 24
2.2 Scanhancer 39
2.3 Interfaces: Connection Between Scanner and Computer 44
2.4 Life After the Purchase 46
2.5 Wish List for Future Film Scanners 50

3 Scanning Film 53

3.1 Handling Film 54
Curled, Wavy Film 54
Physically Removing Dust 55
Inserting Film Correctly 56
Finding the Emulsion Side 56
Handling Film Strips 56
Destroy Originals after Scan? 57

3.2 Film Types 58
Color Negatives 58
Color Slides 58
Kodachrome Slides 60
Black and White Negatives 60
The Ideal Film for Scanning 61
Slide Mounts: Glass and Glassless 62
Glass Mounts 62
Glassless Mounts 63

4 File Formats 65
4.1 Digital Negatives 66
4.2 Color Depth in Image File Formats 68
4.3 Important Image File Formats in the World of Scanning 70
4.4 The Right Image Size and Resolution 77

5 Color Management in Theory and Practice 81
5.1 Why Color Management? 82
5.2 Basics 82
5.3 Color Models 84
5.4 Color Spaces 86
5.5 ICC Profiles 88
5.6 Monitor Calibration in Practice 92
5.7 Generating ICC Scanner Profiles 97

6 Scanning Methods 99
6.1 Thumbnail Index – Filmstrip Offset and Presorting 100
6.2 Preview – Corrections Before the Scan 100
6.3 Multi-Sampling/Multi-Exposure 105

7 Scanning Correction Filters in Detail 107
7.1 Dust and Scratch Removal in Software 108
SilverFast SRD 108
SilverFast iSRD 110
7.2 Dust and Scratch Removal in Hardware 112
Digital ICE 112
Silver crystals block infrared detection 112
ICE and FARE for Kodachrome-Slides 114
ICE and FARE for black and white negatives 115
Infrared Clean – Scratch Removal in VueScan 116
7.3 Restoring Faded Colors 117
Nikon Scan: Digital ROC™ 117
VueScan: Restore Fading 117
7.4 Grain Equalization 119
Digital GEM 119
VueScan Grain Reduction 119
SilverFast GANE 121
7.5 Highlight and Shadow Recovery 122
Digital DEE – Correction for Highlights and Shadows 122
SilverFast AACO – Autoadaptive Contrast Optimization 122

8 Configuring the Scanning Software 123
8.1 Image Orientation 124
8.2 Image Properties 127
8.3 Color Balance 128
8.4 Unsharp Masking 131
8.5 Curves 132
8.6 LCH Editor 137
8.7 Analog Gain 141

9 Nikon Scan 143
9.1 Installation 144
9.2 Look and Feel 145

9.3 Saving Configurations 149
9.4 Preferences 152
9.5 Color Management 156
9.6 Documentation 159
9.7 Conclusion 160

10 VueScan 161
10.1 Purchase and Installation 162
10.2 Look and Feel 163
10.3 RAW Data 170
10.4 Documentation 172
10.5 Conclusion 172

11 SilverFast 173
11.1 SilverFast SE, Ai, Ai Studio and HDR 174
11.2 Look and Feel 174
11.3 Set Basic Configuration with Options 178
11.4 Image Processing 181
11.5 RAW Processing with SilverFast HDR 181
11.6 Documentation 184
11.7 Conclusion 184

12 Scan Workflows 187
12.1 Vital Corrections before Scanning 188
Level Adjustment: Before or After the Scan? 189
Drop-outs with 8-Bit 189
Bigger Reserves with 12-Bit 189
12.2 Nikon Scan Workflow 190
Scanning Slides Individually and with a Slide Feeder 190
Nikon Scan: Batch Scanning of Negatives with Filmstrip Adapter 191
12.3 SilverFast Workflow 192
Digitizing Black and White Negatives 192
12.4 VueScan Workflow 193
Scanning Single Slides 193
VueScan: Scanning Negative Strips with the Filmstrip Adapter 194

13 Nikon Capture NX 2 195
13.1 RAW Data Processing Using Capture NX 2 196
Differences Between Capture and Photoshop & co. 196
Better than Adobe? 197
13.2 The User Interface 198
New Browser 198
Dynamic Palettes 199
13.3 Important Features 200
The Crop Tool 200
D-Lighting : Successor to Digital DEE 200
Lost Highlights and Shadows 201
Correcting Slanted Horizons 202
Before and After 202
Selection Tools and Other Similar Functions 203
Wedding Photos in RAW format 203
Control Points 204

The Auto Retouche Brush 204
Limited Brush Configuration 204
No Downward Compatibility 204
Correcting Red-eye Effects in NEF Files 206
Color Boost 207
Photo Effects 207
13.4 U Point Technology 208
Control Points Instead of Layers and Masks 208
More Control Points = More Precision 209
13.5 Grain, Noise, and Unsharp Masking 210
An Alternative to GEM 210
New Filters 210

14 Correcting with Photoshop and Photoshop Plug-ins 211
14.1 Dust and Scratch Removal 212
Removing Scratches with the Clone Stamp 212
Healing Brush and Spot Healing Brush 213
Dust & Scratch Removal Plug-in from Polaroid 214
14.2 Image Corrections 215
Correcting Perspective Distortion 215
Selectively Correcting Shadows and Highlights 216
Straightening Horizon 217
14.3 Photoshop Plug-ins from Applied Science Fiction 217
Grain Removal with Digital GEM 218
Digital Fill-Flash with SHO 218
Restoring Colors with Digital ROC 219
Plug-in vs. Scanprogramm 219
14.4 Removing Color Casts 220
14.5 Match Color 222
14.6 Noise Reduction with Noise Ninja 223
14.7 Noise Reduction with Neat Image 224

15 Backup 225
15.1 Saved Does Not Automatically Mean Safe 226
15.2 Backup to Hard Disk 226
Backup to the Same Partition 226
Backup to an Additional Hard Disk 226
15.3 Archiving on Removable Media 227
Optical Media: CD, DVD and Blue-ray 228
Image Tape 228
15.4 Image Management 229
Setting Up an Image Database – Folder and File Structures 229
Cataloging with IPTC Data 230
Organizing Images with ThumbsPlus 231
Batch Renaming Files: LupasRename 232

Glossary 233
