Preface	1
1 Introduction	3
1.1 Analog and Digital Workflows	4
Analog Workflow for Negative Film	4
Analog Workflow for Slide Film	5
Hybrid Workflow: Shooting Analog, Scanning, Digital Processing	6
Digital Workflow: Shooting and Editing	8
1.2 Alternatives to the Film Scanner	10
Megapixel in Comparison: DSLR, Film Scanner, 35 mm Film	10
Digital Single Lens Reflex Cameras	12
Flatbed Scanners with Transparency Adapter	13
Scanning Prints	17
Shooting a Projected Slide with a Digital Camera	18
Duplicating Slides with DSLR and Slide Copy Attachment	18
Film Processing with Photo CDs	18
Kodak Picture CDs	18
Fujicolor CD	19
Comparison: Photo CDs vs. Manual Scans	19
Professional Scanning Services	22
2 Performance Characteristics of Film Scanners	23
2.1 Key Specifications of a Film Scanner	24
2.2 Scanhancer	39
2.3 Interfaces: Connection Between Scanner and Computer	44
2.4 Life After the Purchase	46
2.5 Wish List for Future Film Scanners	50
3 Scanning Film	53
3.1 Handling Film	54
Curled, Wavy Film	54
Physically Removing Dust	55
Inserting Film Correctly	56
Finding the Emulsion Side	56
Handling Film Strips	56
Destroy Originals after Scan?	57
3.2 Film Types	58
Color Negatives	58
Color Slides	58
Kodachrome Slides	60
Black and White Negatives	60
The Ideal Film for Scanning	61
Slide Mounts: Glass and Glassless	62
Glass Mounts	62
Glassless Mounts	63

4	File Formats	65
4.1	Digital Negatives	66
4.2	Color Depth in Image File Formats	68
4.3	Important Image File Formats in the World of Scanning	70
4.4	The Right Image Size and Resolution	77
5	Color Management in Theory and Practice	81
5.1	Why Color Management?	82
5.2	Basics	82
5.3	Color Models	84
5.4	Color Spaces	86
5.5	ICC Profiles	88
5.6	Monitor Calibration in Practice	92
5.7	Generating ICC Scanner Profiles	97
6	Scanning Methods	99
6.1	Thumbnail Index – Filmstrip Offset and Presorting	100
6.2	Preview – Corrections Before the Scan	100
6.3	Multi-Sampling/Multi-Exposure	105
7	Scanning Correction Filters in Detail	107
7.1	Dust and Scratch Removal in Software	108
	SilverFast SRD	108
	SilverFast iSRD	110
7.2	Dust and Scratch Removal in Hardware	112
	Digital ICE	112
	Silver crystals block infrared detection	112
	ICE and FARE for Kodachrome-Slides	114
	ICE and FARE for black and white negatives	115
	Infrared Clean – Scratch Removal in VueScan	116
7.3	Restoring Faded Colors	117
	Nikon Scan: Digital ROC™	117
	VueScan: Restore Fading	117
7.4	Grain Equalization	119
	Digital GEM	119
	VueScan Grain Reduction	119
	SilverFast GANE	121
7.5	Highlight and Shadow Recovery	122
	Digital DEE – Correction for Highlights and Shadows	122
	SilverFast AACO – Autoadaptive Contrast Optimization	122
8	Configuring the Scanning Software	123
8.1	Image Orientation	124
8.2	Image Properties	127
8.3	Color Balance	128
8.4	Unsharp Masking	131
8.5	Curves	132
8.6	LCH Editor	137
8.7	Analog Gain	141
9	Nikon Scan	143
9.1	Installation	144
9.2	Look and Feel	145

9.3	Saving Configurations	149
9.4	Preferences	152
9.5	Color Management	156
9.6	Documentation	159
9.7	Conclusion	160
10	VueScan	161
10.1	Purchase and Installation	162
10.2	Look and Feel	163
10.3	RAW Data	170
10.4	Documentation	172
10.5	Conclusion	172
11	SilverFast	173
11.1	SilverFast SE, Ai, Ai Studio and HDR	174
11.2	Look and Feel	174
11.3	Set Basic Configuration with Options	178
11.4	Image Processing	181
11.5	RAW Processing with SilverFast HDR	181
11.6	Documentation	184
11.7	Conclusion	184
12	Scan Workflows	187
12.1	Vital Corrections before Scanning	188
	Level Adjustment: Before or After the Scan?	189
	Drop-outs with 8-Bit	189
	Bigger Reserves with 12-Bit	189
12.2	Nikon Scan Workflow	190
	Scanning Slides Individually and with a Slide Feeder	190
	Nikon Scan: Batch Scanning of Negatives with Filmstrip Adapter	191
12.3	SilverFast Workflow	192
	Digitizing Black and White Negatives	192
12.4	VueScan Workflow	193
	Scanning Single Slides	193
	VueScan: Scanning Negative Strips with the Filmstrip Adapter	194
13	Nikon Capture NX 2	195
13.1	RAW Data Processing Using Capture NX 2	196
	Differences Between Capture and Photoshop & co.	196
	Better than Adobe?	197
13.2	The User Interface	198
	New Browser	198
	Dynamic Palettes	199
13.3	Important Features	200
	The Crop Tool	200
	D-Lighting : Successor to Digital DEE	200
	Lost Highlights and Shadows	201
	Correcting Slanted Horizons	202
	Before and After	202
	Selection Tools and Other Similar Functions	203
	Wedding Photos in RAW format	203
	Control Points	204

The Auto Retouche Brush	204
Limited Brush Configuration	204
No Downward Compatibility	204
Correcting Red-eye Effects in NEF Files	206
Color Boost	207
Photo Effects	207
13.4 U Point Technology	208
Control Points Instead of Layers and Masks	208
More Control Points = More Precision	209
13.5 Grain, Noise, and Unsharp Masking	210
An Alternative to GEM	210
New Filters	210
14 Correcting with Photoshop and Photoshop Plug-ins	211
14.1 Dust and Scratch Removal	212
Removing Scratches with the Clone Stamp	212
Healing Brush and Spot Healing Brush	213
Dust & Scratch Removal Plug-in from Polaroid	214
14.2 Image Corrections	215
Correcting Perspective Distortion	215
Selectively Correcting Shadows and Highlights	216
Straightening Horizon	217
14.3 Photoshop Plug-ins from Applied Science Fiction	217
Grain Removal with Digital GEM	218
Digital Fill-Flash with SHO	218
Restoring Colors with Digital ROC	219
Plug-in vs. Scanprogramm	219
14.4 Removing Color Casts	220
14.5 Match Color	222
14.6 Noise Reduction with Noise Ninja	223
14.7 Noise Reduction with Neat Image	224
15 Backup	225
15.1 Saved Does Not Automatically Mean Safe	226
15.2 Backup to Hard Disk	226
Backup to the Same Partition	226
Backup to an Additional Hard Disk	226
15.3 Archiving on Removable Media	227
Optical Media: CD, DVD and Blue-ray	228
Image Tape	228
15.4 Image Management	229
Setting Up an Image Database – Folder and File Structures	229
Cataloging with IPTC Data	230
Organizing Images with ThumbsPlus	231
Batch Renaming Files: LupasRename	232
Glossary	233
Resources	235
Index	237
DVD	240
